ALIGNMENTS

P10301 ID P10301 standard; Protein; 3 AA. P10301; RESULT

(first entry) 19-AUG-1992

Sequence which corresp. to resides 19-21 of insulin A chain.

Cystine peptide; insulin activity; hormone; diabetes therapy; antidiabetic agent.

Mammal.

Location/Qualifiers Key Disulfide-bond

/note= "bonded to Cys(5) of P10115, which is residue 19 of the B chain fragment B15-27"

DD147942-A.

```
The inventors claim synthetic peptides which correspond to sequences occurring in EGF, but excluding EGF. The peptides are angiogenic and have corresp. applications, eg for the healing of wounds and burns. Their relative shortness means that they pose fewer synthesis problems than the entire EGF molecule. They can be admin. singly or association with each other or in association with an angiogenic
                                                                                                                                                                                                                                                                  to residues 12-14 of naturally occurring
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synthetic peptide active in stimulating angiogenesis -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The article for inactivating a toxic material comprises a solid carrier bearing a first receptor which binds the target ligand and a second receptor which degrades the target ligand. This synthetic peptide is a preferred first receptor. The article may be used for covering surfaces to protect or decontaminate the surface. The article is especially toxic organic cyds., esp. organophosphorous cyds., (eg pesticides and nerve poisons, bacteria and viruses, in environmental, chemical, military and industrial settings.
                                                                                      The inventors claim the prepn. of new cysteine peptides with insulin-
                                                                                                      like activity. The new peptides comprise a sequence with corresp. to a central portion of the insulin B chain (esp. B15-27) and a cysteine-contg. peptide with an AA sequence corresp. to a terminal portion of the insulin A chain (esp. A1-7). The new cysteine peptides are antidiabetic agents with appreciable insulin activity (lower than that of insulin itself) and low antigenic activity.
                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Article for inactivating toxic materials, eg organo:phosporous cpds. comprises solid carrier bearing target ligand binding receptor and ligand-degrading receptor, pref. enzyme

                                                                                                                                      1GF-1 analogues used pref. (i) lack 1-5 N-terminal amino aicds or (ii) have Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-1 analogue pref. comprises the N-terminal IGF-2 analogues used pref. have Glu(2) or Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-2 analogue pref. Esp. Long R3 IGF-1, given in R51450-53.

Esp. Long R3 IGF-1, given in R51454 is used. It is the full human IGF-1 sequence with Arg replacing Glu(3) and a 13 amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                            Growth of birds is increased by (a) admin. to the bird, in ovo, insulin-like growth factor (IGF)-1 or -2 or their active analogues; (b) incubating to hatch and (c) growing the birds for at least 3 weeks after hatch.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Growth of birds is increased by (a) admin. to the bird, in ovo, insulin-like growth factor (IGF)-1 or -2 or their active analogues; (b) incubating to hatch and (c) growing the birds for at least 3

IGF-1 analogues used pref. (i) lack 1-5 N-terminal amino aicds or (ii) have Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-1 analogue pref. comprises the N-terminal Given in R51439-49.

IGF-2 analogues used pref. have Glu(2) or Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-2 analogue pref. comprises the N-terminal given in R51450-53.

Esp. Long R3 IGF-1, given in R51454 is used. It is the full human IGF-1 sequence with Arg replacing Glu(3) and a 13 amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Growth of birds is increased by (a) admin. to the bird, in ovo, insulin-like growth factor (IGF)-1 or -2 or their active analogues; (b) incubating to hatch and (c) growing the birds for at least 3 weeks after hatch.

IGF-1 analogues used pref. (i) lack 1-5 N-terminal amino aicds or (ii) have Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced given in R51439-49.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Increasing growth of birds - with insulin-like growth factor delivered to the egg before hatching esp. for increasing wt. gain

IGF-2 analogues used pref. have Glu(2) or Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-2 analogue pref. comprises the N-terminal given in R51450-53.

Esp. Long R3 IGF-1, given in R51454 is used. It is the full human IGF-1 sequence with Arg replacing Glu(3) and a 13 amino acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A peptide (W19847) comprises the three N-terminal amino acid residues of human interleukin-12 (IL-12) p40 subunit. It is encoded both by native human p40 cDNA (T72096) and by a primer (T72095) based on the native sequence. PCR amplification has been used to amplify p40 cDNA. A fusion protein comprising the p40 subunit and human FC gamma-1 (see also W19853) was expressed in E. coli. This fusion protein has a longer in vivo half-life than native p40 and can be used as an immunosuppressive (e.g. to treat autoimmune diseases or to inhibit graff rejection) or to treat or prevent endotoxin-induced shock.
                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Fusion protein containing interleukin-12 p40 sub-unit - has increased stability, used to inhibit graft rejection, or treat autoimmune disease and endotoxin-induced shock

The peptides can be covalently linked to one another either directly or through a spacer. The peptides and their derivatives have macrophage inhibitory and T-cell inhibitory activity and thus, anti-inflammatory activity. The peptides and compositions have anti-inflammatory activity. I.e. inhibitory effects against a cellular and humoral immune response, including a response not associated with inflammation. The peptides also inhibit the ability of macrophages and reals to adhere to extracellular matrix components and fibronectin, as well as up-regulated fast receptor expression in T-cells. They can be used to inhibit unwanted immune reaction and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                W56171-248 represent anti-inflammatory tripeptides of the invention. They are derived from the formulae:
Xaa-Glu-Arg, Arg-Glu-Xaa, Xaa-Arg-Glu, or Glu-arg-Xaa, where
Xaa = any amino acid residue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Anti-inflammatory peptides and derivatives - used for treating, e.g arthritis, ulcerative colitis, auto-immune disease, allergy asthma, shock, HIV infection, transplant rejection or Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                            Anti-inflammatory; macrophage inhibitory activity; fibronectin; T-cell inhibitory activity; adherence; extracellular matrix; up-regulation; fas receptor expression; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ő

Cyclic derivatives of the peptides also function as anti-inflammatory agents. The peptides can be covalently linked to one another either directly or through a spacer. The peptides and their derivatives have macrophage inhibitory and T-cell inhibitory activity and thus, anti-inflammatory activity. The peptides and compositions have anti-inmune activity. I.e. inhibitory effects against a cellular and humoral immune response, including a response not associated with inflammation. The peptides also inhibit the ability of macrophages and T-cells to adhere to extracellular matrix components and fibronectin, as well as up-regulated fas receptor expression in T-cells. They can be used to inhibit unwanted immune reaction and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Anti-inflammatory peptides and derivatives - used for treating, e.g. arthritis, ulcerative colitis, auto-immune disease, allergy asthma, shock, HIV infection, transplant rejection or Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         W56171-248 represent anti-inflammatory tripeptides of the invention.
                                                                                    Anti-inflammatory; macrophage inhibitory activity; fibronectin; T-cell inhibitory activity; adherence; extracellular matrix; up-regulation; fas receptor expression; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Anti-inflammatory; macrophage inhibitory activity; fibronectin; T-cell inhibitory activity; adherence; extracellular matrix; up-regulation; fas receptor expression; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 They are derived from the formulae:
Xaa-Glu-Arg, Arg-Glu-Xaa, Xaa-Arg-Glu, or Glu-arg-Xaa, where
Xaa = any amino acid residue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              75.0%; Score 9; DB 19; Length 3; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   W56171-248 represent anti-inflammatory tripeptides of the invention.
They are derived from the formulae:
They are derived from the formulae:
They are derived from the formulae:
They are din-May, Arg-Glu, Arg-Glu, or Glu-arg-Maa, where
The any amino acid residue

Cyclic derivatives of the peptides also function as anti-inflammatory
agents. The peptides can be covalently linked to one another either
agents. The peptides and their derivatives have
macrophage inhibitory and T-cell inhibitory activity and thus,
anti-inflammatory activity. The peptides and compositions have
anti-inmune activity, i.e. inhibitory effects against a cellular and
humoral immune response, including a response not associated with
inflammation. The peptides also inhibit the ability of macrophages and
inflammation derived the extracellular matrix components and fibronectin, as
well as up-regulated fas receptor expression in T-cells. They can be used
to inhibit unwanted immune reaction and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                              Peptides W88033-39 are used in the hair composition of the invention. The specification describes a hair composition that comprises at least one oligopeptide having more than two cysteine residues and more than three amino acid residues of the same kind (except cysteine) and a reducing agent. The composition is useful for styling hair to take various shapes and waves safely and effectively.
                                                                                                         New composition for hair - comprises oligopeptide having more than 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Biostatin preparation in high yield by solid synthesis, including closure of disulfide bridge before cleavage from support, useful as antitumor agent -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                               As a cflu-Arg, Arg-Glu-Xaa, Xaa-Arg-Glu, or Glu-arg-Xaa, where Xaa = any amino acid residue.

Xaa = any amino acid residue.

Xaa = any amino acid residue.

Cyclic derivatives of the peptides also function as anti-inflammatory agents. The peptides can be covalently linked to one another either directly or through a spacer. The peptides and their derivatives have macrophage inhibitory and T-cell inhibitory activity and thus, anti-inflammatory activity. The peptides and compositions have anti-inmune activity, i.e. inhibitory effects against a cellular and humoral immune response, including a response not associated with inflammation. The peptides also inhibit the ability of macrophages and T-cells to adhere to extracellular matrix components and fibronectin, as well as up-regulated fas receptor expression in T-cells. They can be used to inhibit unwanted immune reaction and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                        Anti-inflammatory peptides and derivatives - used for treating, e.g. arthritis, ulcerative colitis, auto-immune disease, allergy asthma, shock, HIV infection, transplant rejection or Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                    W56171-248 represent anti-inflammatory tripeptides of the invention. They are derived from the formulae:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

This invention describes a novel method for the solid phase (SP)
Synthesis of biostatin (TT 232) (I) which includes closing the disulfide
bridge by oxidation of the completely or partially constructed peptide
while still bonded to the solid phase. The products of the invention have
cytostatic activity and are tyrosine kinase inhibitors. (I) inhibits the
tyrosine kinase activity of various human stomach cancer cell lines and
thus inhibits cellular proliferation. The heptapeptide (I) described in
the invention is a somatostatin analog which shows strong antitumor
cativity in vitro and in vivo. The SP synthesis method gives (I) is more
easily and in markedly higher yield than by the method of EP505680, in
which the cyclization is carried out after cleaving the peptide from the
tresin. The solution method is also a simple synthesis of (I) in high
yield; typically the tert-butyl-protected precursor can be oxidized in
a yield of 70-80%. Y51896-Y51900 represent peptides used in the
synthesis of biostatin TT232 described in the method of the invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

A.Title: Structure and synthesis of an immunoactive lipopeptide, WS1279, of microbial A. Riefrence number: J00355; MUID: 91300586
A. Recession: J00355
A. Molecule type: protein
A. Residues: 1-6 < TSUS
A. Molecule type extructure was confirmed by synthesis
C: Keywords: blocked amino end: lipoprotein
F: 1/Binding site: sn-2,3-diacylglycerol (Cys) (covalent) #status experimental
F: 1/Modified site: fatty acylated amino end (Cys) #status experimental
                                                                              S65726 hemoglobin, extracellular, chain b - earthworm (Lumbricus terrestris) (fragment)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

"Active site amino acid sequence of the bovine O6-methylguanine-DNA methyltransferase.";

"Nucleic Acids Res. 18:17-21(1990).

-!- FUNCTION: REPAIR OF ALKYLATED GUANINE IN DNA BY STOICHIOMETRICALLY TRANSFRRING THE ALKYL GROUP AT THE O-6 POSITION TO A CYSTEINE RESIDUE IN THE ENZYME. THIS IS A SUICIDE REACTION: THE ENZYME IS IRREVERSIBLY INACTIVATED.

-!- CATALYTIC ACTIVITY: DNA (CONTAINING O6-METHYLGUANINE) + PROTEIN L.CYSTEINE DNA (WITHOUT O6-METHYLGUANINE) + PROTEIN S-METHYL-

Reich G.;

"A new peptide of the oxytocin/vasopressin family isolated from nerves of the cephalopod Octopus vulgaris.";

Neurosci. Lett. 134:191-194(1992).

-! FUNCTION: HAS A ROLE IN THE NEUROSECRETORY SYSTEM OF THE VENA CAVA.

-! SIMILARITY: BELONGS TO THE VASOPRESSIN/OXYTOCIN FAMILY.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Description

The inventors claim synthetic peptides which correspond to sequences occurring in EGF, but excluding EGF. The peptides are angiogenic and have corresp, applications, eg for the healing of wounds and burns. Their relative shortness means that they pose fewer synthesis problems than the entire EGF molecule. They can be admin. singly or association with each other or in association with an angiogenic
                                                                                                                                                                                                                                                           to residues 12-14 of naturally occurring
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Synthetic peptide active in stimulating angiogenesis - has sequences corresponding to amino acid sequences occuring in epidermal growth factor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The article for inactivating a toxic material comprises a solid carrier bearing a first receptor which binds the target ligand and a second receptor which degrades the target ligand. This synthetic peptide is a preferred first receptor. The article may be used for covering surfaces to protect or decontaminate the surface. The article is esp. for degrading toxic organic openic openics, besp. organophosphorous cpds., (eg pesticides and nerve poisons, bacteria and viruses, in environmental, chemical, military and industrial settings.
                                                                                      The inventors claim the prepn. of new cysteine peptides with insulin-
                                                                                                    like activity. The new peptides comprise a sequence with corresp. to a central portion of the insulin B chain (esp. B15-27) and a cysteine-conty. peptide with an AA sequence corresp. to a terminal portion of the insulin A chain (esp. A1-7). The new cysteine peptides are antidiabetic agents with appreciable insulin activity (lower than that of insulin itself) and low antigenic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Article for inactivating toxic materials, eg organo:phosporous cpds. comprises solid carrier bearing target ligand binding receptor and ligand-degrading receptor, pref. enzyme
